

Model: BP-C01

Smart chiller controller, convenient Wi-Fi connection, easy control. Troubleshooting function ensures stable operation of the equipment. Simple design brings convenient experience.

Super load-bearing capacity: can bear a large amount of weight to ensure reliable movement of the bracket.

Flexible and convenient: save extra equipment and easily move to any location.

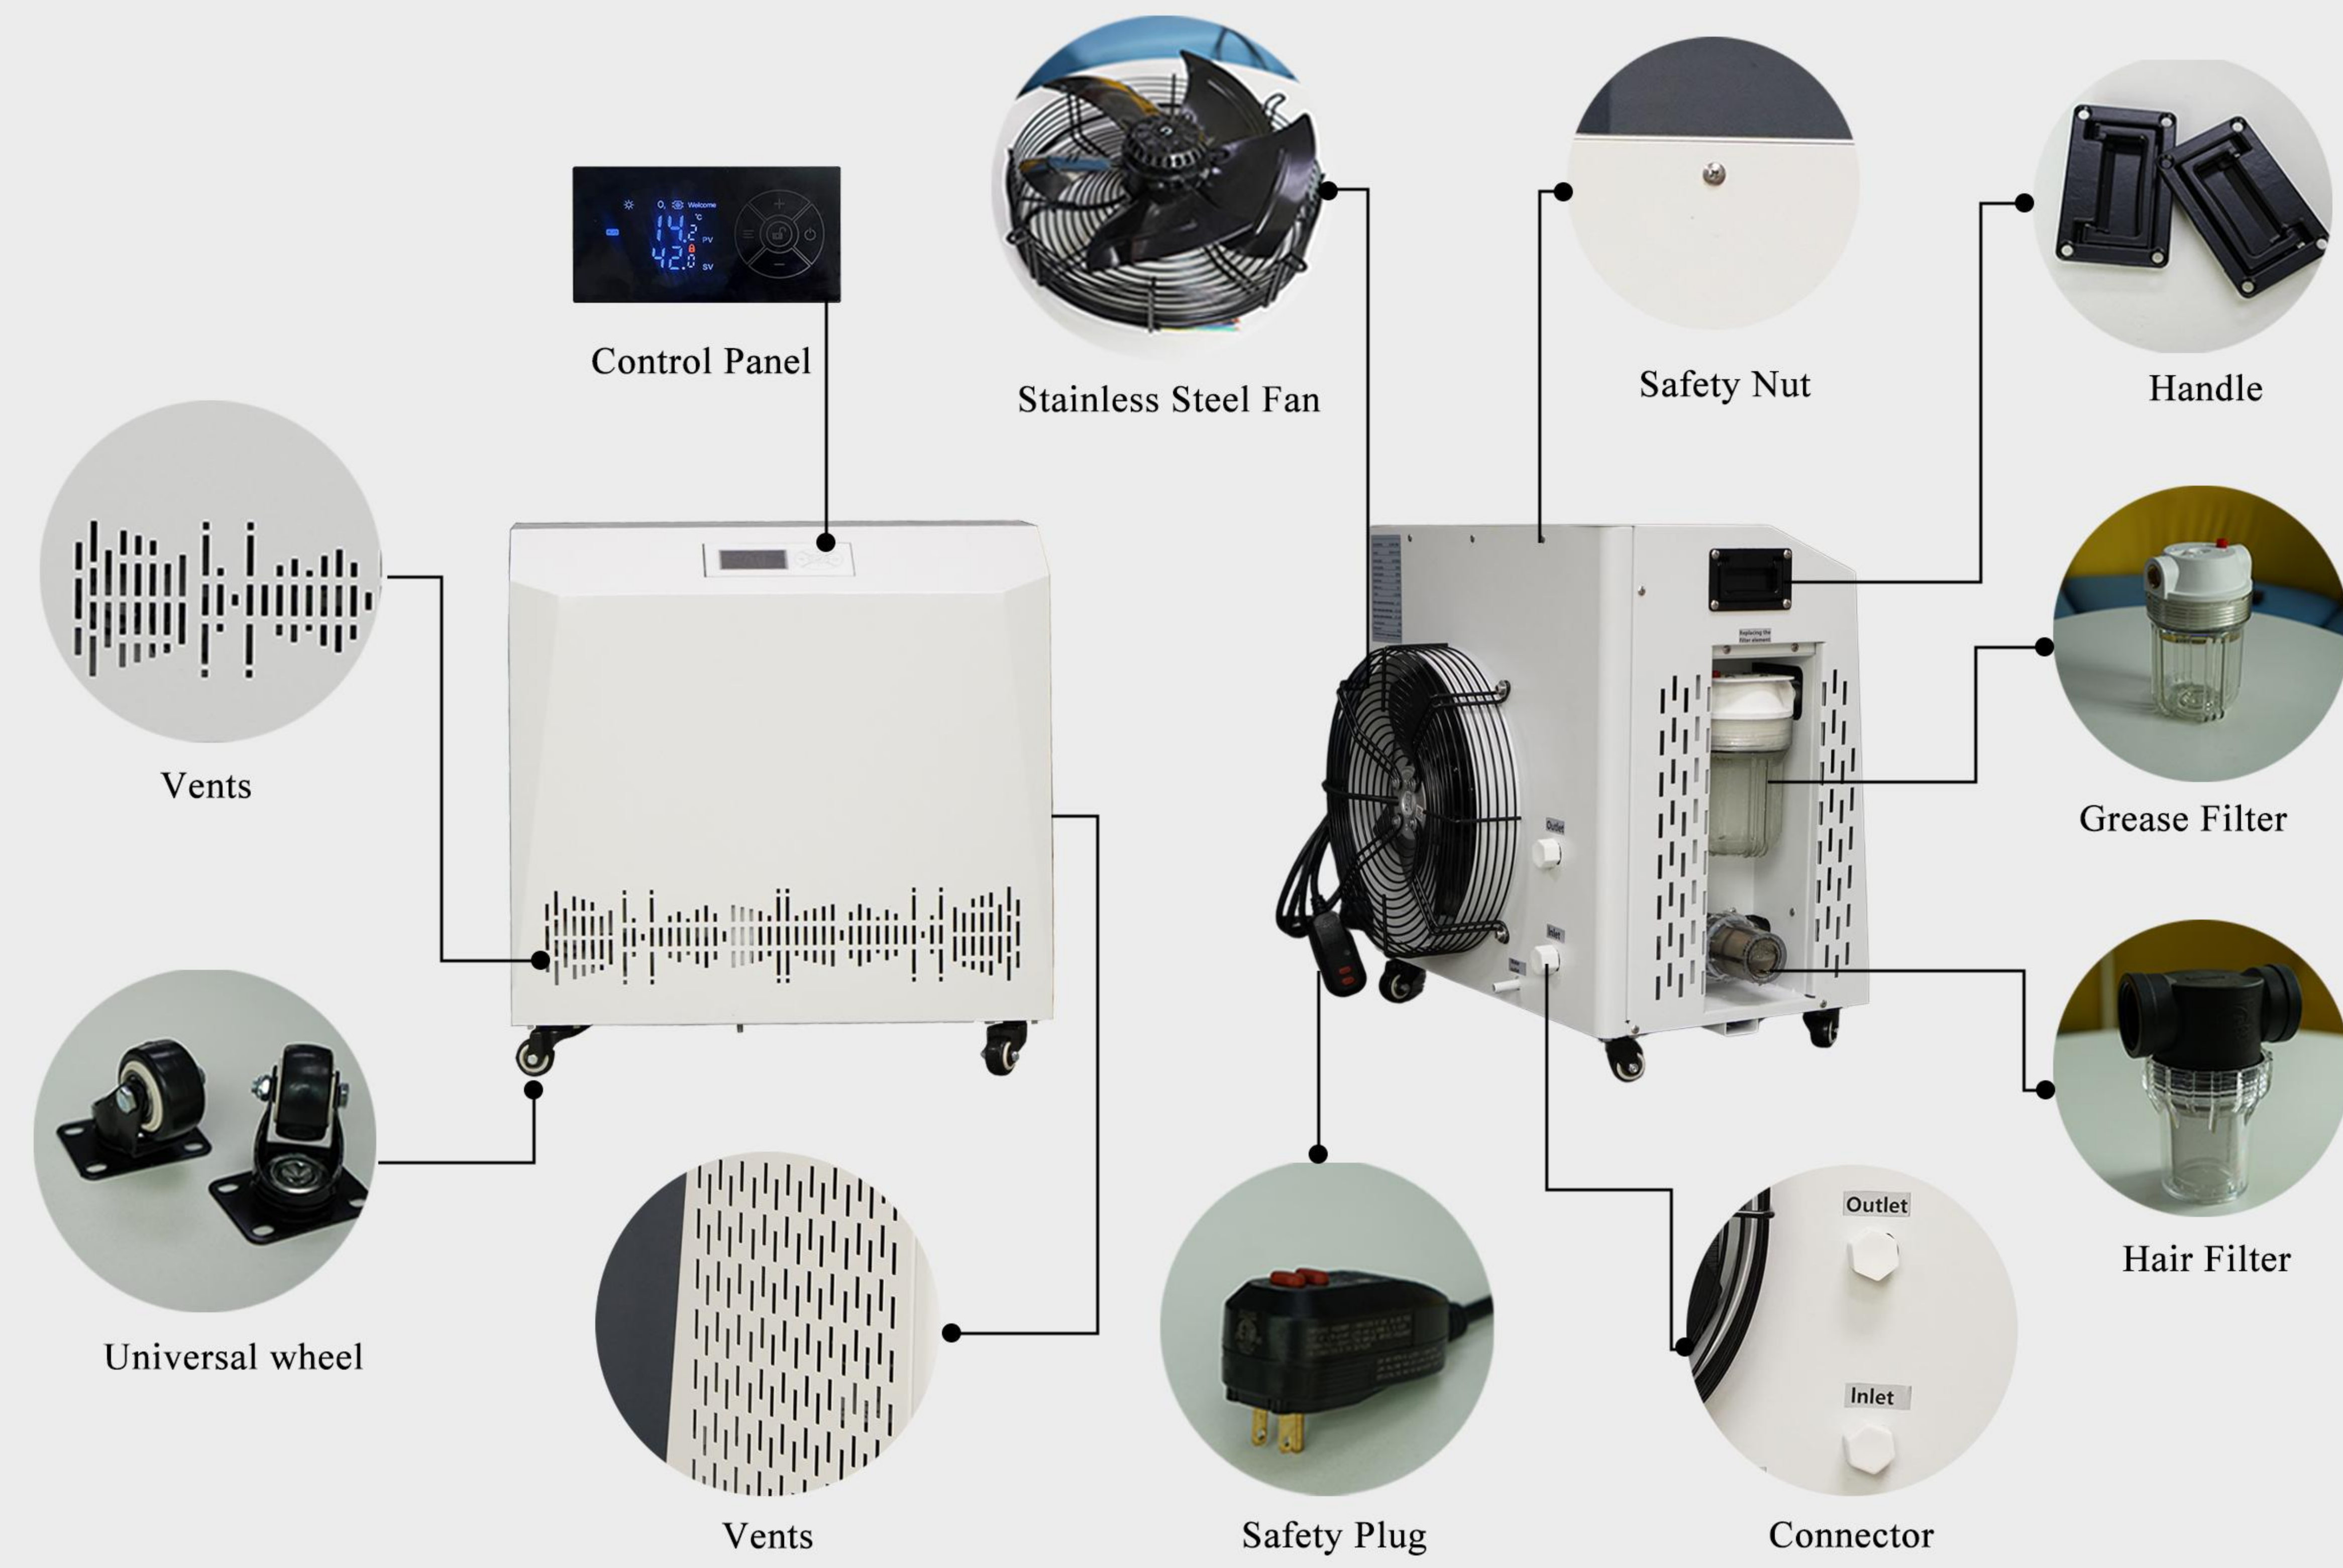

Multi-directional movement: It can rotate 360 degrees and move flexibly in any direction.

Reduce damage: Reduce ground risk.

Widely applicable: Suitable for various environments and occasions.

Model: BP-HS-01

Enjoy using your hot tub as often as you'd like without racking up those electric bills. This wood-burning hot tub heater consumes zero electricity and gas, and does not require any pumps, wiring or a filtration system to operate.

Whether you are looking for a more cost-effective hot tub solution for your home or want to enjoy soaking in your tub off the grid, this wood stove and chimney kit is the perfect addition to your wooden hot tub. The internal hot tub design sits directly inside your wooden hot tub, which helps heat the water faster and more efficiently than an external heater. When more firewood is needed, simply remove the furnace cover to access your stove. Made from stainless steel, this hot tub heater is designed to be rust and corrosion resistant. An iron anti-scald cover is attached to the chimney for safety.

Model: BP-HS-04

Internal hot tub heater offers faster heating time than external wood-fired heater as there is almost zero heat escape. The internal stove consumes around 25% of the tub's space. Snorkel hot tub stove offers more atmosphere as you sit close to the fire. Therefore there are also a few disadvantages of it, as it can be dangerous to children because the heater is installed inside the hot tub and it also takes more time to clean it.

Standard size:
External Dimensions:L662.94mm*W332.74mm* H2494.28mm

Model: BP-HS-05

It has an open stainless steel housing. Depending on your wishes, you can choose to pour the water over the side of the stove or directly over a pile of rocks, creating gentle or intense heat.

It has a partially open enclosure on the front, which allows the user to take advantage of the large number of bricks or place the stove in a smaller space. F has a sturdy envelope. Thanks to the enclosure, the safety distance is shortened, so the stove can be placed in a smaller room and a bench installed nearby. This provides more creative freedom when designing the sauna.
